

# P4 Kiosk PC

Multi-Media Kiosk PC system with the latest Pentium specification and O/S

Our specially designed Kiosk PC is primarily designed to operate within Future Generation Kiosks. However, because of the non-proprietary nature and ergonomic design of this module, it is well suited for a wide range of applications.

The extreme flexibility of this unit enables it to be situated three orientations, as depicted. This facilitates easy integration into many other kiosk units where space may be a premium. Some important features of kiosk systems, often overlooked, is the ability to support additional peripherals, which may require a 12v power supply, or extended audio capabilities. Our kiosk PC Module, with its optional internal amplifier, and easily accessible power ports, has the flexibility to accommodate these additional features.

## Physical Specifications

<i>Dimensions (WxHxD)</i>	<b>TBA x TBA x TBA</b>	<i>Operating Environment</i>	<b>N/A</b>
<i>Weight</i>	<b>TBA</b>	<i>Audio</i>	<b>N/A</b>
		<i>RTB Warranty</i>	<b>1 Year</b>
		<i>Build Material</i>	<b>Powder Coated Steel</b>
		<i>Fixing Details</i>	<b>TBA</b>

<i>Manufacturer</i>	<b>Future Generation</b>	<i>Controller Model</i>	<b>N/A</b>
